UK Socket/C16 Commando Plug Rack PDU

Rackly Rax's full range of high-quality BS 1363 UK socket Power Distribution Units (PDU's) are available with or without surge & filter protection, supplied pre-terminated with a blue 16A IEC 60309 (BS 4343) 'commando' plug on a two metre 1.5mm² H05VV-F rated black cable. The PDU's have multiple outputs designed to distribute electrical power within 19" cabinets to servers, switches, routers, and other networking equipment located in data centres, central offices, or internet exchanges for example.

The 4 and 6-way PDU's are mounted horizontally within 19" cabinets. All other sizes are vertically mounted onto the back profile of the cabinet. A key feature of the surge protected and filtered PDU's is their ability to provide surge and circuit protection. This aids to safeguard critical equipment from potential electrical damage, downtime, or data loss in the event of power surges or spikes.
