

UFO DIY Installer Kit

The Connectix UFO DIY Installer Kit is a 'one-box' solution for an efficient and discreet fiber cabling installation in any type of dwelling. To be used alongside the complete Connectix UFO solution, the UFO Squebble completes a professional, discreet connection and allows a quick and easy install.

Featuring a low profile and unobtrusive design, the UFO Squebble can be surface mounted on to any substrate using the fixings provided.

The internal drum contains a pre-terminated 30m fiber spool, ready for use. The installation process is made efficient through the use of

the UFO accessories. The UFO Button allows the cable to pass through a wall to the UFO corners which then guide the fiber around tight bends.

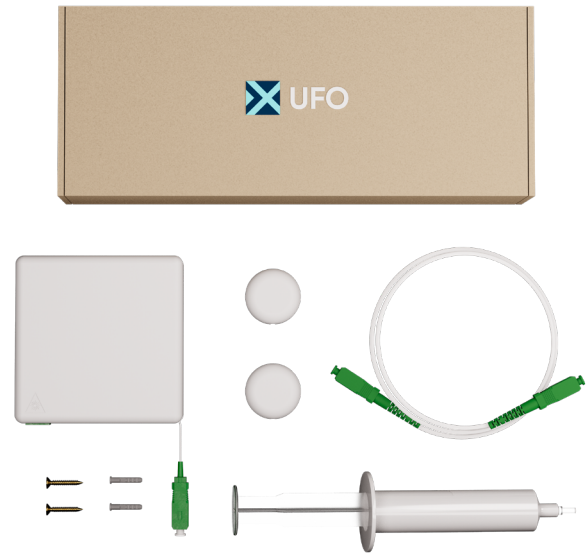

The UFO Cold Cure Glue comes ready with an applicator tip allowing for easy application, great adhesion and minimal overspill. Once installation is complete, the glue will dry down to a completely transparent finish with the UFO system remaining virtually unseen.

Features & Benefits

- An efficient one-box solution
- Suitable for new build and retrofit
- Suitable for both SDU and MDU
- UFO Button neatly covers engineer drill holes
- UFO Squebble is compact and unobtrusive
