

Project Scope Overview	
Customer:	Gloucester Rugby Limited  <b>GLOUCESTER RUGBY</b>
Installer:	Converge Networks Ltd
Site Location:	Gloucester
Requirements:	Category 5E UTP

### Project Brief

The Main Contractor designed a tight schedule to allow the last game in 06/07 season to be played and guarantee a working stadium by November 2007. Converge Networks had to ensure delivery on time. 253 Enhanced Category 5 outlets and a wireless network were installed throughout the 114m long stadium at Kingsholm. Converge also installed the AV and PA systems within the specification. Special consideration had to be made for the design of the network to ensure the media teams, printed press and TV broadcast teams; had enough bandwidth and connections within the stand.

*"Connectix was the reliable choice to go for; performance and cost outweighed any other choices. The ability to brand the faceplates was excellent touch"*

Gareth Balmer, IT Manager at Kingsholm

Below is a picture of the branded Elite faceplates with Traffolyte port numbering. These faceplates and administration system are guaranteed for the life time of the cabling system.
